Hello,

My name is Camille Markowski, and I'm writing to inquire about voice feminization surgery at Yeson Voice Center. I'm a 23-year-old trans woman from Canada (born June 8, 2002), and after extensive research and voice training, I believe VFSRAC may be the right step forward for me.

I've been on hormone replacement therapy since September 2023 and am a non-smoker and non-drinker. Over the past year, I've worked actively on voice feminization, beginning with self-directed training throughout 2024 and 2025, followed by formal voice training with specialist Kylie Wayne from April to July 2025. Through this work, I've developed the technical ability to reach feminine pitch ranges (160-175 Hz baseline with spikes to 200+ Hz), and I've learned proper resonance and intonation techniques. However, maintaining this baseline requires constant conscious effort and monitoring, which I've found psychologically and physically exhausting to sustain long-term.

I understand that VFSRAC works by shortening and repositioning the vocal folds to raise the fundamental frequency, creating a naturally higher baseline pitch. I also understand that this isn't a replacement for voice training; I would still need to continue working on resonance, intonation, and speech patterns after surgery. What appeals to me about VFSRAC is that it would allow me to apply the techniques I've already learned without the constant struggle of manually raising my baseline pitch. I'm committed to following all post-operative care requirements, including vocal rest protocols and any recommended follow-up therapy.

I'd like to learn more about whether I am a suitable candidate for this procedure. Specifically, I'd like to understand the consultation and evaluation process, the total cost breakdown including surgery and post-operative care, what pre-operative assessments or documentation you require, the recommended post-operative stay duration in Seoul, and the recovery timeline for returning to normal voice use. I'm planning for a potential visit to Seoul in mid-2026, though I'm flexible based on your recommendations and availability.

Thank you so much for your time and expertise. I'm genuinely excited about the possibility of working with your team, and I look forward to learning more about the next steps.

Best regards,

Camille Markowski

Hi Camille :)

From: Yeson Voice Center

Your assistant in charge: Kay (The director of Global Healthcare Department)

Official working hours: Tue – Fri/ 9am – 6pm (Local time)

Thank you for contacting Yeson Voice Center in Korea. This is Jessie in charge of the Global Healthcare Department. VFSRAC surgery requires **email consultation** so please submit all required data to check your surgical eligibility and be responsible for reading all given information regarding VFSRAC surgery below.

★ 1st step to make a booking

- 1) Please submit the Pre-op checklist form enclosed to this email
- 2) We need your separate 4 voice recordings. Name the recording as below.
10 sec 'Ah' sound (untrained)/ 10 sec Ah sound (trained or higher pitch)
Rainbow passage (untrained)/ Rainbow passage (trained)

*Rainbow passage reading with your untrained and trained voice.

When the sunlight strikes raindrops in the air, they act like a prism and form a rainbow. The rainbow is a division of white light into many beautiful colors. These take the shape of a long round arch, with its path high above, and its two ends apparently beyond the horizon. There is, according to legend, a boiling pot of gold at one end. People look, but no one ever finds it.

In case of a patient biologically born female with Androphonia problem, a hormone level test and video endoscope must be provided as well to check the surgical eligibility

*Important: Please note that patients with AIDS, HIV, renal failure, high liver level, liver cirrhosis and cold symptoms (high fever) are not eligible for VFSRAC surgery. Especially if you have a hoarse voice or suspect any laryngeal diseases then please submit your video endoscope to check if you have any laryngeal diseases. Otherwise, you may need two separate surgeries.

★★ 2nd step: SCHEDULING PROCESS (Waiting time: 1~3 months)

Please inform us of the earliest date you can arrive in Seoul first and we will plan your schedule checking the dates available on our calendar.

Schedule format (example)

You must arrive the day before your consultation!

Day 1: Consultation/Examinations (takes 3 hours/ Fasting required 4 hours prior)

Day 2 Operation (Discharge the same day around at 4pm)

Day 4: Follow-up (takes 2 hours): Follow-up, Botox treatment, Voice Exercise Observation

Day 5: Depart to your country

(This is just an example. According to our schedule availability the schedule may change!)

★When your schedule date is fully confirmed, the following steps are required.

- 1) Check all information in the PRE-TRAVEL CHECKLIST before you book your flight.
- 2) Book your flight/hotel and provide the information to confirm your booking.
- 3) Contact Jessie on whatsapp (+82-10-3013-8767) to communicate more easily during your trip.
- 4) Wire-transfer the surgery fee or confirm your payment method.
- 5) Our driver will contact you to book your X-ray.

★ ★ ★ Cancellation policy ★ ★ ★

4~6 week pre-notice is required to cancel or reschedule your appointment.

Otherwise, rescheduling process will be restricted for future appointment for at least 2 years.

★★★ 3rd step: HOTEL BOOKING

Hotel that are closely located from our clinic.

★★★Entra hotel (within 5 minute walking distance)

★★★Hotel Riviera (within 10 minute walking distance)

★Foreheal hotel ★Patio7 hotel ★Andaz hotel

★Aiden by Best Western Cheongdam ★Four Points by Sheraton Seoul Gangnam

★Aloft Seoul Gangnam ★Other accommodations located close to Cheongdam area

★★★★Final step: Payment

* All payment should be made the day before your operation. There's no exemption on this.

* We would recommend you should wire-transfer to avoid any conflicts using the credit card.

Please wire-transfer at least 2 weeks in advance covering all commission fees.

* There could be **extra surgery fee** in case you have any other **laryngeal diseases**.

Please provide your video endoscope for us to check if you have any vocal folds problems.

★VFSRAC SURGERY FEE INFORMATION★

VFSRAC SURGERY PACKAGE FEE: USD\$9800

Botox treatment: \$400

(We can offer free Botox if you agree with providing your before and after videos)

*Revision fee: \$2000

* Package Inclusion:

- ☐ - Doctor's consultation/ Comprehensive Voice Analysis Examination
- ☐ - Basic pre-operation tests (X-ray, blood tests, EKG)
- ☐ - Operation + Anesthesia
- ☐ - Day's stay in a private single room + 1 time meal after the operation
(You will be discharged the same day around at 5pm)
- ☐ - Post-op medications/ Follow-up
 - Botox injection on bilateral vocal folds

★Recovery

You should stay in silence for 8 weeks. After 4 weeks following your surgery, you can start speaking 1~2 words per day for another 4weeks. Please do not try to abuse your voice by shouting, singing, whispering and etc during this 2 month post-op period. When coughing please open your mouth and escape the air only without generating any sound.

For the first two months, you should be careful coughing and must avoid having spicy food, caffeinated products (x coffee, coke, chocolate and etc) and doing all exercises including light yoga.

★Further intubation

You're allowed to have the next general anesthesia procedure after 3months following your VFSRAC surgery. **The recommended tube size is #6.0 or any size below #6.0 to prevent any damage to the surgical site.**

Please be responsible for reading all this given information before you travel to Korea.

Guidebook enclosed might be helpful preparing for your trip to Korea.

★ ABOUT VFSTRAC SURGERY

Surgical method and its strength

Vocal Folds Shortening and Retrodisplacement of Anterior Commissure (VFSTRAC) involves the 1/3 dissection of the vocal folds membrane and suturing of the vocal folds muscles using a permanent material. VFSTRAC can shorten, thin and tighten the vocal folds to the extent at which you could fully sound feminine. Since it does not involve the laser, you shouldn't worry about hoarseness following the surgery and the use of the permanent material for the sutures maintains your outcome permanently so you shouldn't worry about losing your higher range by time. VFSTRAC surgery is authentic in its surgical method making it possible to modify many aspects in one procedure. Firstly the length, width and tension are modified as those of females and it also corrects the asymmetric vocal folds that affect your voice quality. It also preserves all functions of vocal folds so singing is possible following the VFSTRAC surgery. Dr. Kim's paper regarding the effectiveness of VFSTRAC surgery is published in the World's leading ENT journal, 'The Laryngoscope.' It's the first and the only procedure that has officially proved its effectiveness. We have the most reviews from our patients so please search Yeson Voice Center on Youtube or visit our website to check our patients' reviews.

Expected outcome and cautions

Depending on your own voice characteristics and post-op care, the result may vary. The average pitch increase following the VFSTRAC surgery is more or less 74hz and it takes more or less 1 year to achieve this outcome. VFSTRAC satisfaction rate being over 90%, you should be aware that certain conditions do not allow you to draw the full outcome. Based on our data there were many factors that have affected the surgical outcome. Those include the patient's age (the result is better when a patient is below 46 years old), severity of vocal folds tremor, presence of other laryngeal dysphonia and so forth. VFSTRAC surgery requires post-op voice training until you could fully adapt to using the newly recreated vocal folds but in case patients cannot modify their old phonatory pattern, it's likely that it takes more than a year of resonance training.

Side effects and complications

VFSTRAC surgery is strongly recommended for all patients who want to feminize their voice without worrying about possible voice loss or any other common side effects like sounding hoarse and having an unnatural voice tone after the surgery. Common complications now following the VFSTRAC surgery could include small bleeding on the surgical site, tongue numbness, and so forth but all these symptoms will be temporary.

Please feel free to ask your questions after fully reading this information ☺

Sincerely,

Kay Kim
